## Design

- Aircooled 2, 3 and 4-cylinder fourstroke Diesel engines.
- Grey cast iron crankcase, grey cast iron vertical in-line cylinders.
- Crankshaft and conrod running on shell-bearing.
- Individual cylinders (grey cast iron), individual cylinder-heads (light metall) and individual injection pumps.
- Removal of piston and conrod possible in upwards direction.
- Direct injection with multi-hole nozzle.
- Control of valves by rockers, pushrods, tappets and camshaft.
- Separate camshaft for drive of injection pumps with centrifugal variable speed governor and automatic injection timer.
- Pressure lubrication system with gear pump. Oilcooler and replaceable filter element in main flow.
- Axial-type blower fan with integrated alternator.

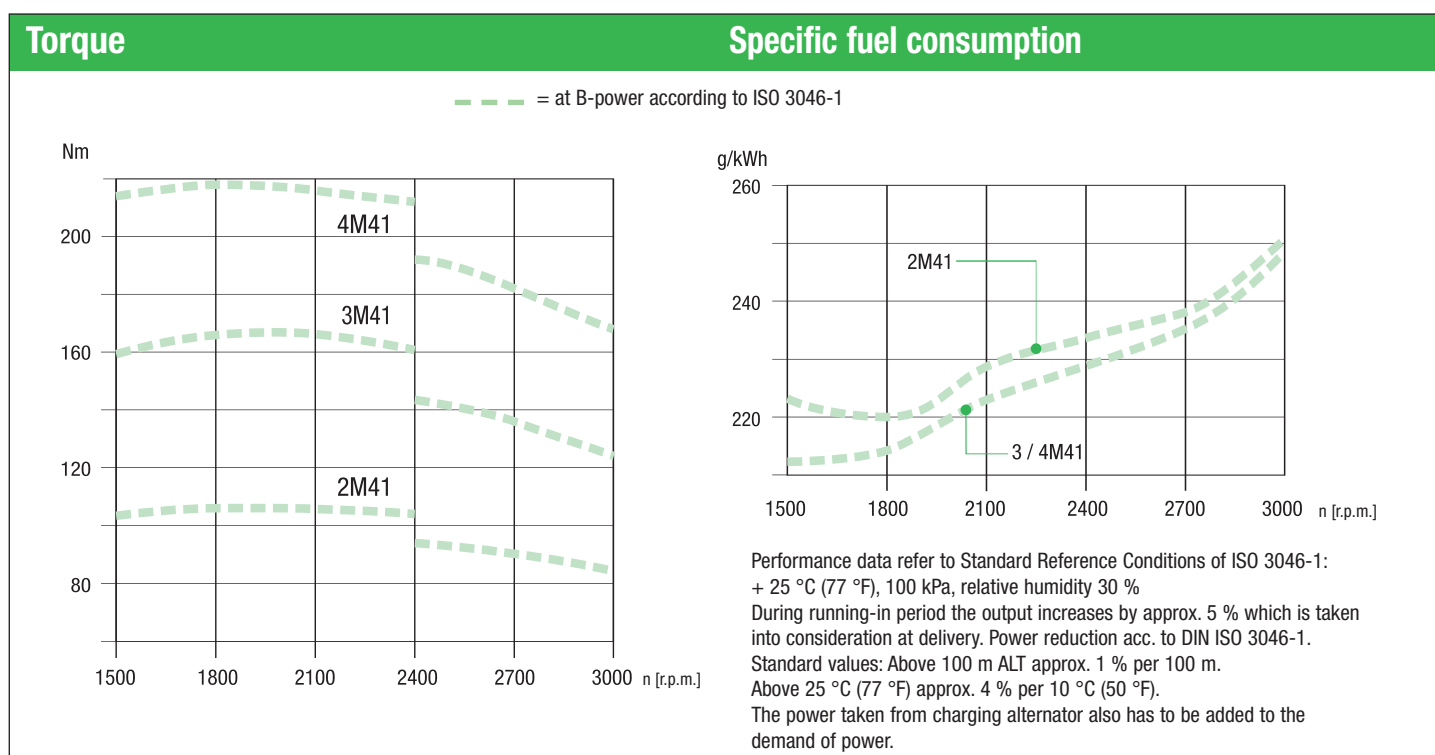

## Characteristics

- The Diesel engine ready for installation and operation.
- All-purpose industrial Diesel engines.
- Extremely low fuel- and oil consumption.
- Exhaust emission well below all valid limits for operating machines in EU, USA and Japan.
- Robust, and long-lived engine.
- Extensive parts interchangeability due to modular system.
- Low repair cost due to individual cylinders, individual cylinder-heads and individual injection-pumps.
- Unusual reliability because of:
  - Automatic belt control
  - Automatic extra fuel device
  - Dry-type airfilter, protected against severe contamination
  - Gearwheels to drive camshafts and oil pump
- Easy to service because of:
  - Automatic injection pump bleeding
  - Operating and maintenance points at one engine side only
  - Hydraulic belt tensioner

## Additional equipment

Technical data		2M41	3M41	4M41
Number of cylinders		2	3	4
Bore x stroke	mm	102 x 105	102 x 105	102 x 105

	cu.ft./min	92	138	184
Cooling air required at 3000 r.p.m. approx. <sup>1)</sup>	m <sup>3</sup> / min	29	39	49
	cu.ft./min	1024	1377	1730
Moment of inertia	SAE-flywheel 8"	0.64 kgm <sup>2</sup> (15.2 lb.ft <sup>2</sup> )	0.65 kgm <sup>2</sup> (15.4 lb.ft <sup>2</sup> )	0.67 kgm <sup>2</sup> (15.9 lb.ft <sup>2</sup> )
	flywheel for F+S clutch	0.49 kgm <sup>2</sup> (11.6 lb.ft <sup>2</sup> )	0.50 kgm <sup>2</sup> (11.9 lb.ft <sup>2</sup> )	0.51 kgm <sup>2</sup> (12.1 lb.ft <sup>2</sup> )
Starter		12 V - 2.7 kW (3.7 HP) — 24 V - 4.0 kW (5.4 HP)		
Alternator charging current at 3000 / 1500 r.p.m.		14 V - 60 / 42 A — 28 V - 40 / 28 A		
Battery capacity	min / max. Ah	12 V - 88 / 143 Ah — 24 V - 55 / 110 Ah		

<sup>1)</sup> For other r.p.m. there is a linear reduction of the air requirement

## Permissible load on power-take-off points

### Flywheel side

Power-take-off at full engine torque.

- max. permissible axial force F2 = 2700 N
- max. permissible radial force F1

$$F1 = \frac{400\,000}{L1 \text{ (mm)} - 73} \text{ (N)}$$

This data decreases by half if the direction of belt tension is upwards. If the radial force exceeds the permissible data F1 an outboard-bearing is necessary.

### Governor side

Drive pulley R:

- max. permissible torque 32 Nm
- max. permissible axial force F4 = 1770 N
- max. permissible radial force F3 (belt tension in any direction)

$$F3 = \frac{228\,330}{L2 \text{ (mm)} - 76} \text{ (N)}$$

All power-take-offs = engine speed

### Shaft W

Max. permissible torque 70 Nm.  
Axial and radial forces not permitted.  
Suitable for hydraulic pump-drive.

## Maintenance and operating points

For the engine to achieve its maximum life, it is essential for it to be serviced meticulously at regular intervals.

The better the accessibility, the more promptly and conscientiously the engine will be maintained.

Please convince yourself personally that all service and operation points are easily accessible before delivering your machine to the customer.

## Electrical equipment

The engine-mounted components, such as starter, alternator and switches, are connected to the instrument box by means of a 2 m cable harness. The engine is started and controlled from this instrument box. Instrument box and cable harness are part of the additional equipment and supplied according to the number of electrical safety features which are required.

If the engine has to be started at temperatures below - 10 °C, it must be equipped with a pre-heating system (glow plug) (additional equipment). Further additional equipment includes automatic start and stop, remote control etc.

Please ask for drawings and wiring diagrams.

## Power-Take-Off and Sense of Rotation

- Main power-take-off at flywheel (pict. 1).
- Power-take-off crankshaft governor side with engine speed. Maximum permissible torque 70 Nm, axial and radial forces not permissible but for drive of hydraulic pumps only (pict. 2/W).
- Power-take-off belt pulley with engine speed. Maximum permissible torque 32 Nm, for axial and radial power-take-off (pict. 2/R).
- Sense of rotation see picture 1 and 2.
- Engine flangeable at flywheel-side.

## Engine model

- **Model . M41:** up to 3000 r.p.m.
- **Model . M41Z:** up to 3000 r.p.m. with additional balancing shaft „Z“ (pict. 3). (deduct the required absorbed power for the balancing shaft in your calculation, depending on cylinders 0.3-1.5 kW)

## Engine variants (pict. 4/5)

- **Variant III:** Crankhandle start on governor side, heavy flywheel ( $n_{max} = 2600$  r.p.m.).
- **Variant XI:** Electric start 12 V, standard flywheel.
- **Variant XII:** Electric start 12 V, heavy flywheel ( $n_{max} = 2600$  r.p.m.).
- **Variant XIII:** Electric start 24 V, standard flywheel.
- **Variant XIV:** Electric start 24 V, heavy flywheel ( $n_{max} = 2600$  r.p.m.).

## Weight

	2M41		3M41		4M41	
	kg	lbs.	kg	lbs.	kg	lbs.
Var. III, XII, XIV	294	648	—	—	—	—
Var. XI, XIII	258	569	308	679	373	822

## Scope of delivery of engine

Engine tested for full load on test bench. Engine fitted with blower fan, variable speed governor, injection timer, lubricating oilfilter, dry-type airfilter, hydraulic belt tensioner, automatic stop in case of belt failure, automatic extra fuel device, automatic injection pump bleeding, eye hook for transport of engine (only suitable to carry the engine weight). Painting in HATZ standard colours. Engine without oil.

**Accessories:** Gaskets for 1st maintenance.

Further equipment included in engine variants:

- **Variant III:** Support for crankhandle, automatic decompression, maintenance indicator for air filter, fuel feed pump and fuel filter, exhaust manifold, heavy flywheel, engine brackets, additional oil sump (4M41).
- **Variant XI:** Electric starter 12 V, 2.7 kW, alternator 14 V, 60 A, engine wiring, electric maintenance indicator for airfilter, oil pressure switch, fuel feed pump and fuel filter, exhaust manifold, engine brackets, additional oil sump (4M41).
- **Variant XII:** same as Variant XI, however heavy flywheel.
- **Variant XIII:** same as Variant XI, however electric starter 24 V, 4.0 kW and alternator 28 V, 40 A.
- **Variant XIV:** same as Variant XI, however electric starter 24 V, 4.0 kW, and alternator 28 V, 40 A, heavy flywheel.

## Additional equipment

Thanks to the complete programme of additional equipment engine can be adapted to the special requirements of every application. As a minimum every engine needs the “additional equipment, necessary for operation”. For selection of additional equipment see “Engine and Equipment Survey”.

# Dimensions

\*) Max. permanent tilting

## Engine mounting

Flexible mounting is recommended for M-Series engines. The flexible mounting keeps the noise level of the driven unit low. Another possibility is the flexible mounting with elevated engine brackets. Please ask for drawings. Rigid mounting is possible only up to an operating speed of 2300 r.p.m.

	AA	BB	CC	DD
2M41	424	333	435	387
3M41	559	468	570	522
4M41	694	603	705	657

Spread at outlines  $\pm 3$  mm due to tolerance.

Drawings with detailed - and connection measures can either be demanded or downloaded as pdf- resp. dxf-file which are shown in the Internet.
